RIGHTALLY | PRODUCT GUIDE

Modules & Features Guide

38 modules, four suites, one platform for US brokerages
What brokers and agents can do in every module

VERSION	1.0 - for review
DATE	November 7, 2026
COMPANION TO	RightAlly Platform Architecture v1.0
PREPARED BY	Mayura Consultancy Services
CLASSIFICATION	Confidential - RightAlly internal

At a glance

RightAlly is 38 modules in four suites on one Platform Core. A brokerage gets the modules in its package, buys more as add-ons, and decides which agents get access to each. This guide lists every module and what brokers and agents can do in it; every website and landing page is SEO and AEO optimised and audited automatically, every user works within a role-based permission matrix, and every change is recorded in a tamper-proof audit log. Detailed specifications follow in Phase 1, module by module.

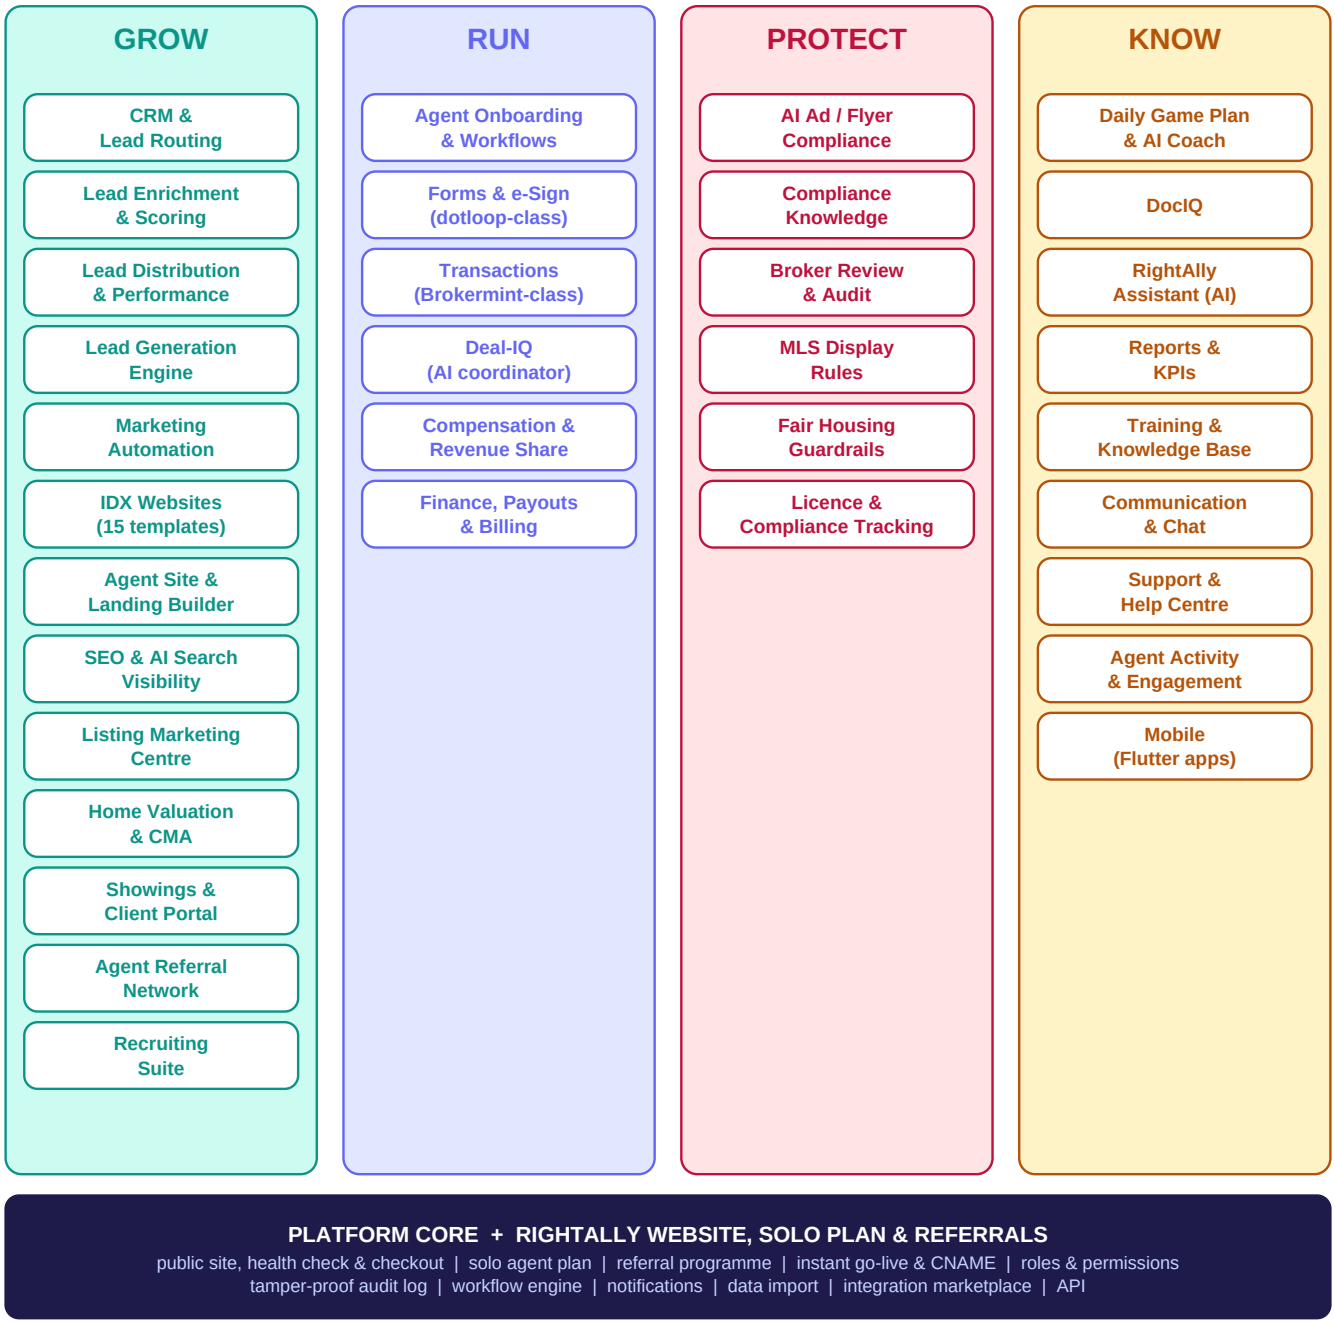

Figure 1 - The 38 modules: four suites on Platform Core and the RightAlly signup website

Suite	Module	Main users	Purpose in one line
Core	Platform Core	Everyone	Login, roles, branding, domains, notifications, workflows, packages
Core	RightAlly for Agents (solo plan)	Independent agents	Agents use RightAlly on their own with a website, landing pages and assistant seats, and bring their broker in with Ask my broker
Core	Referral & Affiliate Programme	Agents, brokers, HQ	Rewards for anyone who brings RightAlly a new brokerage
Core	RightAlly Website & Signup	Prospective brokerages	Compare packages, book a demo, sign and pay online; the brokerage goes live automatically
Grow	CRM & Lead Routing	Agents, broker	Every contact, lead and conversation in one place, routed to the right agent
Grow	Lead Enrichment & Smart Scoring	Agents, broker	Import and enrich every contact, score them Hot to Cold with reasons, and reactivate old databases
Grow	Lead Distribution & Agent Performance	Broker, agents	Leads go to agents who respond fast, follow up and close; scores, tiers, offer windows and automatic reclaim
Grow	Lead Generation Engine	Broker, agents, solo agents	Ready buyer funnels, AI-built ads optimised on real closings, quality filters, content and social autopilot, and lead ROI
Grow	Marketing Automation	Agents, broker	Drip campaigns, listing alerts, email, SMS and social posts
Grow	IDX Websites	Broker, consumers	Brokerage website with live MLS search, from 15 premium templates
Grow	Agent Site & Landing Builder	Agents	Agents build their own pages; every lead goes to their CRM
Grow	SEO & AI Search Visibility	Broker, agents (automatic)	Every site and page optimised for Google and AI answer engines, crawled and audited automatically per tenant
Grow	Listing Marketing Centre	Agents	Listing website, flyers, social posts, video tours and open-house sign-in for every listing, generated automatically
Grow	Home Valuation & CMA	Agents, sellers	Seller lead pages, instant estimates and branded comparative market analyses
Grow	Showings & Client Portal	Agents, buyers, sellers	Showing requests and tour planning, plus a branded portal where clients follow their deal
Grow	Agent Referral Network	Agents, broker	Send and receive client referrals with agents in other RightAlly brokerages, fees tracked to payout
Grow	Recruiting Suite	Broker, recruiters	Find, attract and convert agents with MLS production data, likely-to-move scores, AI outreach, recruiting funnels and earnings comparisons
Run	Agent Onboarding & Workflows	Broker, new agents	Register, documents, agreement, payment, approval
Run	Forms & e-Sign	Agents, clients	Fill state forms and sign them online (dotloop-class)

Suite	Module	Main users	Purpose in one line
Run	Transactions	Agents, broker, staff	Track every deal from contract to close with checklists (Brokermint-class)
Run	Deal-IQ (AI transaction coordinator)	Agents, staff, solo agents	Type or speak to it; reads and drafts contracts; inbox intelligence; graded compliance scan; escalating reminders; 24/7 client concierge; all-party portal
Run	Compensation & Revenue Share	Broker	Comp plans, splits, caps, ranks, revenue share
Run	Finance, Payouts & Billing	Broker, staff, agents	Ledger, agent fees, payouts, 1099s, accounting sync
Protect	AI Ad & Flyer Compliance	Agents, broker	AI checks marketing before it goes out
Protect	Compliance Knowledge	Agents, broker	Ask questions about state law and MLS rules, with sources
Protect	Broker Review & Audit	Broker, staff	One review queue and audit evidence
Protect	MLS Display Rules	Broker (automatic)	Keeps every listing page compliant with MLS rules
Protect	Fair Housing Guardrails	Everyone (automatic)	Flags risky language in listings, ads and messages
Protect	Licence & Compliance Tracking	Broker, agents	Licences, continuing education, E&O insurance and dues tracked with automatic reminders
Know	DocIQ	Everyone	Ask questions about any uploaded document, get corrections suggested, and turn documents into reminders and signature requests
Know	Daily Game Plan & AI Coach	Agents, team leads	Each morning the top actions to take, ranked, with one-click call, text or email
Know	RightAlly Assistant	Agents, staff	AI helper that answers and acts within the brokerage's own data
Know	Reports & KPIs	Broker, agents	Dashboards, leaderboards, goals, custom reports
Know	Training & Knowledge Base	Broker, agents	Courses, videos, policy manual
Know	Communication & Chat	Everyone	Team chat, announcements, events, meetings
Know	Support & Help Centre	Everyone	Help articles, in-app tickets and guided tours
Know	Agent Activity & Engagement	Broker, staff	Who is active, idle or away, last login and what each agent is doing
Know	Mobile (Flutter apps)	Agents, broker	Everything above on phone, built on the same APIs

Version 1.0 scope

Version 1.0 is what brokerages buy at launch. It covers everything a brokerage needs to replace its current tools on day one; the short list at the end follows in later releases.

Area	Included in version 1.0
Platform	RightAlly website and signup (CMS); self-service setup; instant go-live and custom domains; staff, roles and permissions; tamper-proof audit log; AI data protection; packages and billing; data import, one-click migration and white-glove migration service; legacy RightAlly customer migration; AI setup assistant and ready-made library; RightAlly Credits with rate card, agent allowances and top-ups; agent self-purchase; multi-provider AI gateway and model registry; savings calculator; universal search and simple mode; RightAlly for Agents solo plan with solo packages, solo website templates, assistant seats, Ask my broker and data portability; Brokerage Health Check, website scan and instant branded preview; referral and affiliate programme with recruiting badge; monthly ROI report; integration marketplace; morning AI brief; English and Spanish; full data export with no lock-in; mobile web app
Websites	IDX websites with all 15 premium templates; website editor; AI home search; AI website chat; MLS, AI video and 360° tours; floor plans from phone scans; compare homes; mortgage calculators; WCAG 2.2 AA accessibility; SEO and AEO engine; agent site and landing builder; referral links and QR codes
Leads and CRM	Instant AI lead response; unified inbox; lead-source integrations; power dialer and call recording with AI summaries; video messages; booking links; lead routing, pipelines and smart lists; lead intelligence with AI summary notes; lead enrichment, smart scoring and database reactivation; performance-based lead distribution with agent scores and tiers
Marketing	Drip campaigns, listing alerts and market reports; Lead Generation Engine with ready buyer funnels, AI ads optimised on closings, quality filters, content and social autopilot and lead ROI; ad campaigns built and published from each brokerage's own Meta and Google accounts; reviews and reputation; listing marketing centre with AI listing descriptions, open-house sign-in and sign-rider QR codes; home valuation and CMA; seller net sheets and buyer cost estimates
Clients and network	Showing scheduling and tour planner; client portal; agent-to-agent referral network with Referral Trust Score; recruiting suite with MLS agent database, alerts, campaigns, ROI, likely-to-move scores, AI outreach and recruiting funnels
Back office	Onboarding and workflows; buyer agreement e-sign; native forms and e-sign with AI form builder and dotloop, SkySlope, Lone Wolf and DocuSign integrations; transactions with AI document review; Deal-IQ AI transaction coordinator with voice and text, inbox intelligence, state-aware timelines, graded compliance scan, escalating reminders, contract and addendum drafting, client concierge, all-party portal and TC team mode; compensation and revenue share with genealogy views; finance, payouts and billing with electronic W-9, automatic payouts on closing, money-in tracking, payables, bank reconciliation, 1099 e-file and full finance reports
Compliance	AI ad and flyer compliance with visual markup, one-click fixes and MLS fact checks; Compliance Knowledge assistant; licence and compliance tracking; fair housing guardrails; MLS display rules; broker review and audit
Insight, AI and help	Daily Game Plan and AI coach; DocIQ document Q&A, corrections and document-driven automation; RightAlly AI assistant (chatbot); reports and KPIs with business planner, retention alerts, agent success dashboard and custom report builder; agent activity and engagement; training and knowledge base; team chat and announcements; support and help centre

After version 1.0: native Flutter apps for iOS and Android, built on the same APIs. Everything else in this guide is part of version 1.0.

Scope freeze: version 1.0 is fixed at this list. New ideas go to the post-launch backlog so the team can make every module above best in class.

Platform Core (included in every package)

Core is what every brokerage gets on day one: self-service setup, its own domain and brand, users and permissions, and the shared engines every other module uses.

Feature	Brokerage (broker, admin, staff) can	Agent can
Self-service setup	Sign up, pick a package, follow a setup wizard (brand, MLS, template, domain, comp plan, invite agents), go live the same day	Accept an invite and set up a profile
Own domain and brand	Point their domain by CNAME with automatic SSL; set logo, colours, fonts, email sender domain, legal footer; per-office overrides	Use a sub-domain or their own domain (by package)
Instant go-live	Go live immediately on brokerage.rightally.app with a default IDX template; add a CNAME and the platform verifies it, issues SSL and switches over automatically, redirecting the old address	Share the brokerage website from day one
One login per domain	Log in at theirdomain.com/login and land in the admin back office	Log in at the same address on the brokerage's IDX website and land on the agent dashboard
Offices, teams, roles	Create offices and teams; manage staff, roles and permissions (see Staff, roles & permissions)	Join a team; see only their own records unless given more
Login and security	Turn on 2FA for everyone or by role (off by default); set password rules; see active sessions, log in as an agent for support (audited)	Log in from the brokerage's website address with email, Google or Microsoft; turn on 2FA or a passkey for themselves
Module access and seats	Assign purchased modules and seats to agents, teams or offices	Use the modules assigned to them
Workflow engine	Build step-by-step flows (forms, documents, e-sign, payment, approval, notifications) used by onboarding, transactions and marketing	Complete the steps assigned to them
Notifications	Set brokerage-wide templates and required alerts	Choose in-app, email, SMS or push per alert type
Files and documents	Store brokerage files with retention rules	Upload, organise and share documents
Custom fields	Add custom fields to contacts, agents, transactions and listings	Fill and filter by them
Audit trail	See every change in the brokerage (see Audit log)	See their own activity history
Integrations and API	Connect tools by API keys and webhooks	Connect their Google or Microsoft calendar and email
Data import	Import agents, contacts and past deals from CSV, or with one-click importers from BoldTrail/kvCORE, Follow Up Boss, dotloop, SkySlope and Brokermint	Import their own contacts
Subscription self-service	Upgrade or downgrade the package, add agent seats, see RightAlly invoices	—
Integration marketplace	Keep the tools they love through ready connectors, Zapier, webhooks and the public API	Connect personal tools the brokerage allows
Agent dashboard	Choose the default widgets agents see	One home screen: leads, deals, cap progress, downline growth, latest earnings

Feature	Brokerage (broker, admin, staff) can	Agent can
Morning AI brief	Choose what the brief includes for staff and agents	Get a daily game plan each morning (see Daily Game Plan & AI Coach)
Languages	Run the brokerage website, client portal and emails in English and Spanish	Switch their portal and client communications between English and Spanish
Your data is yours	Export all brokerage data at any time in standard formats, with no lock-in	Export their own contacts and documents
AI setup assistant	Upload the policy manual, commission schedule and agent agreement; the AI drafts the comp plan, checklists and workflows for approval	—
Ready-made library	Start from ready comp plans, workflows, campaigns and checklists	Use ready campaigns and templates
Universal search and simple mode	Find any contact, deal, listing or setting from one search bar	Choose simple mode (today's work only) or the full view
Usage credits	Use RightAlly Credits priced per action (e.g. listing description, enrichment lookup, SMS, call minute, video tour), with everyday AI included in seats under fair-use limits; buy credit packs with auto-recharge, low-balance alerts and volume discounts; give each agent plan a monthly credit allowance and caps; see usage by feature and user	Use their allowance and top up themselves if the brokerage allows
Agent self-purchase	Decide which add-ons the brokerage pays for and which agents may buy themselves	Buy allowed add-ons (e.g. premium site, dialer) themselves

Staff, roles & permissions (Core)

Every brokerage, and RightAlly HQ itself, runs on the same staff and permission engine: create staff, give them roles, and control access module by module and action by action. Every module registers its permissions automatically, including modules released later, so a new module appears in every brokerage's role editor the day it launches.

Feature	Brokerage (owner, admin) can	Staff member can
Staff accounts	Invite staff separately from agents; set the offices and teams each person covers; suspend or remove	Log in at the brokerage's domain and see only what their role allows
Ready-made roles	Start from roles such as Office manager, Transaction coordinator, Accountant, Marketing manager, Content editor, Compliance reviewer, Recruiter and Support, or create custom roles	Work within their role
Permission matrix	For every module, choose each action (view, create, edit, delete, approve, export) and the scope (own records, team, office, whole brokerage)	—
Old and new modules	See every module the brokerage has, old and new; a newly released module shows as New with no access until the owner grants it	Get notified when given access to a new module
Sensitive data	Grant viewing of SSNs, bank details and financial figures separately; values are masked otherwise	See masked values unless permitted
Approval limits	Set approval rules, e.g. payouts above a set amount need owner approval or two approvers	Approve within their limits
Temporary access	Grant access with an expiry date	—
Access review	See who can do what, by person or by module, and export it	—
Agents with staff duties	Give an agent an extra role (e.g. team lead, mentor, recruiter)	—

Audit log (every change, everywhere)

Every change in RightAlly is recorded: who, what, when, from where, and the values before and after.

> Nobody can edit or delete the audit log, neither brokerages nor RightAlly.

Feature	Brokerage can	RightAlly HQ can
What is logged	Every create, edit, delete, approval, login and failed login, role and permission change, settings change, export, payout and bank-detail change, plus views of sensitive data	The same across all brokerages, plus every HQ staff action
Detail	See user, role, time, IP address and device, record, and before and after values	—
Search	Filter by user, module, record, action and date; open the full history of any record	Search across brokerages

Feature	Brokerage can	RightAlly HQ can
Tamper-proof	Rely on an append-only, hash-chained log kept for 7 years by default	Verify the log's integrity
Export and alerts	Export to CSV or PDF; get alerts on risky events such as permission escalation, bulk deletes or bank-detail changes	Stream events to security monitoring
Support access	See every time RightAlly support entered their account and what was done	—

AI Data Protection

AI only ever sees what the person asking is allowed to see: no brokerage can see another brokerage's data, and no agent can see or request another agent's data through AI.

Feature	Brokerage can	Agent can
Brokerage isolation	Keep its data in its own space with its own tenant ID, encryption keys and AI search index; no other brokerage's AI can reach it	—
Permission-filtered AI	Let staff and AI see only what each role allows	Get AI answers from their own contacts, deals and documents only; other agents' records are filtered out before the AI sees anything
Personal sphere	Choose in settings whether agents' personal contacts are visible to the brokerage (private by default); business data (deals, documents, compliance, company leads) always visible	See which policy applies to them
Assistants and solo agents	Scope assistants to their own agent's data	Solo agents work in a fully private workspace
No shared memory or training	Rely on every AI request being built fresh with only permitted data; no training on customer data; zero-retention AI providers; personal details stripped where possible	Same protections for their data
Hidden-instruction protection	Rely on documents, emails and forms being treated as data, never instructions; AI limited to the user's permissions	Confirm before the AI sends or deletes anything
Safe cross-brokerage features	Referral network shows opt-in, referral-only figures; recruiting uses licensed MLS data; game-plan learning uses anonymised patterns only	—
Proof and control	See which records each AI answer used in the audit log; turn AI on or off per module; set retention; export or delete data; automated leak tests on every release	—

Grow suite

Grow brings in business: brokerage websites and agent pages are found on Google and cited by AI assistants, their leads land in the CRM, get routed to the right agent, and are nurtured automatically until they become clients or recruits.

CRM & Lead Routing

Feature	Brokerage can	Agent can
Instant AI lead response	Set the AI's tone, working hours, qualifying questions and hand-off rules	Have every new lead texted and emailed within seconds, 24/7, qualified, and handed over with a summary
Unified inbox	See response times across the brokerage	Handle SMS, email, website chat and Facebook/Instagram messages in one inbox per contact
Lead sources	Connect Zillow, Realtor.com, Facebook Lead Ads, Google and Zapier sources; track cost per lead and conversion by source	Get leads from every source in their CRM instantly
Contacts and timeline	See all brokerage contacts by office or team; set data-ownership rules	See every call, text, email, site visit, saved search and note for a contact on one timeline
Lead routing	Set rules: round-robin, by area, price, language, performance; response-time limits with automatic re-routing; ponds for unclaimed leads	Get instant lead alerts; accept and claim leads from the pond
Pipelines	Define stages for buyers, sellers, renters and recruits	Move deals across stages by drag and drop
Tasks and follow-up	See team follow-up compliance	Get a daily to-do list, reminders and suggested next actions
Calling, texting, email	Set brokerage numbers and sending domains	Call, text and email from the contact, with two-way Gmail/Outlook sync
Smart lists and scoring	Create shared smart lists	Use smart lists (e.g. 'hot leads this week') and AI lead scores from website behaviour
Oversight	Dashboards on lead source, conversion and response time by agent	See personal conversion and source reports
Power dialer and call recording	Set calling numbers, recording rules and consent announcements (required in all-party-consent states); scrub lists against Do Not Call registries	Call through lead lists with one click; record calls and get AI transcripts, summaries and next steps saved to the timeline
Video messages	Share brokerage video templates	Record personal video emails and texts and see who watched
Booking links	Set default meeting types	Share a booking link so leads book consultations straight into their calendar
Lead intelligence	See lead engagement across agents	See every home a website lead viewed and how often, time spent, favourites, homes compared, searches and how they shifted, with an AI summary note and suggested talking points at the top of the contact

Feature	Brokerage can	Agent can
Hot-lead alerts	Set alert rules	Get notified the moment a lead returns, re-views a home or saves a new one, with a best-time-to-call hint

Lead Enrichment & Smart Scoring

Feature	Brokerage can	Agent can
Import anything	Import contacts for agents during setup	Import from CSV, phone contacts, Gmail or Outlook, or an old CRM
One-click enrichment	Set enrichment spending limits (each lookup uses usage credits)	Enrich one contact or the whole list: validated phone and email, Do Not Call check, home ownership, estimated value and equity, years owned, renter or owner, likely-to-move signals from licensed property-data providers
Smart scoring	Set scoring rules	See every contact as Hot, Warm, Nurture, Cold or Do not contact, with the reason shown; scores combine intent, fit, readiness, engagement and likelihood to move and refresh daily
Database reactivation	Approve reactivation campaigns	Have AI send personal check-ins to old contacts; anyone who replies with interest jumps to Hot
Oversight	See hot leads not yet touched across agents	—
Responsible use	Enriched data used for marketing and prioritising only, never for credit or eligibility decisions; consent and Do Not Call rules applied before outreach	—

Lead Distribution & Agent Performance

Feature	Brokerage can	Agent can
Lead import and pools	Import leads (CSV, lead sources, purchased leads) into distribution pools	—
Performance targets	Set targets for first response time, contact within a set time, follow-up touches in the first 7 days, CRM updates within 48 hours, appointment rate, closing rate and reviews	See the targets that apply to them
Performance score and tiers	Score every agent 0 to 100 over a rolling 30 or 90 days and place them in tiers it names (e.g. Top, Standard, Probation)	See their score, tier, what affects it and coaching tips to improve
Offer windows	Send hot leads to the top tier first; first to accept wins, then the next tier	Accept offered leads from phone or email
Caps and reclaim	Set capacity caps; reclaim leads automatically when contact targets are missed; pause company-paid leads for agents on probation	Keep leads by contacting them on time
Fairness and control	Give new agents a starter allocation; override any assignment; every assignment in the audit log	—

Feature	Brokerage can	Agent can
Lead-source splits	Set a different split for company-provided leads in the compensation engine	See the split that applies to each lead source

Lead Generation Engine

Feature	Brokerage can	Agent can
Ready buyer funnels	Launch company funnels in a few clicks: landing page, ad campaign, lead form, AI follow-up and nurture (first-time buyer, homes under a price, new construction, relocation, VA and FHA-friendly, price-drop alerts, open-house finder, rent vs buy)	Launch the same funnels for their own area; solo agents use their personal site and landing pages
AI ads	Have the AI write copy, build creatives from listings and brand assets and suggest budget and area; housing-ad rules applied; published to the brokerage's own Meta and Google accounts	Launch AI-built ads from their own or the brokerage's account, as allowed
Optimised on closings	Send Meta and Google the leads that became appointments and closings so ads find more real buyers	Benefit from better-quality leads over time
Quality filters	Block fake leads with phone and email validation; AI qualification and a quality score on every lead	Receive only validated, qualified and scored leads
Content and social autopilot	Run AI-drafted neighbourhood pages, market reports and blog posts (reviewed before publishing) and Google Business Profile posts	Auto-post listings, market updates and short videos to Instagram, Facebook, TikTok and YouTube Shorts
Distribution	Feed company leads into Lead Distribution so top performers get them	Receive leads based on performance
Lead ROI	See cost per lead, per appointment and per closing by source, with AI budget suggestions	See their own lead ROI

Marketing Automation

Feature	Brokerage can	Agent can
Drip campaigns	Build brokerage campaigns and share them with all agents	Use ready campaigns or build their own by trigger (new lead, viewed listing, price drop, anniversary)
Listing alerts and market reports	Brand the alerts	Set saved-search alerts and monthly market reports for clients
Email and SMS builder	Approve brand templates	Design emails and texts from templates; schedule sends
Social posting	Publish brokerage posts	Schedule posts for new listings, open houses and solds
Consent and deliverability	Complete SMS (A2P 10DLC) registration; manage unsubscribes and consent records	Send only to contacts with valid consent, handled automatically
Analytics	Compare campaign results across agents	See opens, clicks, replies and leads per campaign

Feature	Brokerage can	Agent can
Ad campaigns	Connect the brokerage's own Meta (Facebook, Instagram) and Google Ads accounts; create campaigns, ad sets and ads for listings, seller leads and recruiting and publish them from RightAlly; Meta and Google bill the brokerage directly; housing-ad rules (Meta Special Ad Category) applied automatically; see spend, cost per lead and results	Connect their own ad accounts (if the brokerage allows) or launch ads under the brokerage account in a few clicks; leads arrive in their CRM with the source tagged
Reviews and reputation	See ratings across agents; show testimonials on the brokerage site	Request reviews automatically after closing (Google, Zillow, own site) and publish the best ones on their pages

IDX Websites

Feature	Brokerage can	Agent can
MLS connection	Choose their MLS, enter broker and office MLS IDs and e-sign the MLS authorisation; see connection status, last sync and display rules (read-only; RightAlly holds the feed keys and never shows them)	Have their MLS ID matched to their profile so their listings appear automatically
Templates	Choose from 15 premium, mobile-first templates and switch anytime	Get a matching agent profile page
Website editor	Edit logo, favicon, colours, hero carousel or video, featured listings, communities, testimonials, menus, footer, blog and pop-up forms; add pages from a template or blank; preview, schedule and roll back revisions	Write blog posts (if allowed)
Home search	Offer map, list and draw-on-map search, filters, saved searches and alerts from live MLS data, plus AI search in plain English ('3 beds near good schools under $400k with a pool')	Share searches and listings with clients
Virtual tours	Show the MLS-provided virtual tour on every listing (Matterport, iGuide, 3D or video links; unbranded where MLS rules require)	Add tours to their own listings (see Listing Marketing Centre)
Lead capture	Set registration rules (e.g. after 3 listing views) and routing	Receive leads from their profile and shared links in their CRM
Search and listing pages	Restyle the template-controlled search and listing-detail pages without breaking MLS rules, SEO or speed	—
Legal pages	Get privacy, terms, fair housing and accessibility pages generated automatically	—
SEO and speed	Get technical SEO, AEO and fast loading built in (see SEO & AI Search Visibility)	—
MLS compliance	Rely on automatic MLS disclaimers and attribution	—
Calculators	Show mortgage and affordability calculators on listing pages	Share them with buyers

Feature	Brokerage can	Agent can
AI website chat	Set the assistant's name, tone and hand-off rules	Have a 24/7 assistant answer questions about listings, capture the lead and book showings into their calendar
Accessibility	Rely on every template meeting WCAG 2.2 AA accessibility standards, reducing legal risk	—
Compare homes	Offer side-by-side home comparison on every site	See which homes each lead compared

Agent Site & Landing Builder

Feature	Brokerage can	Agent can
Page builder	Lock brokerage branding and compliance blocks; share page templates	Pick from a list of ready landing-page templates or build from scratch with drag-and-drop sections (listing, open house, buyer guide, home valuation, about me)
Lead capture	Set default routing	Have every form and call-to-action create a lead in their own CRM
Join the brokerage	Connect 'Join' buttons to the onboarding workflow	Recruit agents and earn sponsor credit through their page
Referral link and QR code	See referral performance across agents; set attribution rules	Share a personal referral link or QR code: leads go to their CRM, agents who join through it are assigned to them as sponsor; see clicks and conversions
Domains	Allow agent sub-domains or own domains by package	Publish on a sub-domain or their own domain
Testing and stats	See page performance across agents	A/B test pages; see visits and conversions
SEO and AEO	Rely on every agent page meeting the same SEO and AEO standards as the brokerage site	Publish pages that are indexed, structured for AI answers and scored automatically (see SEO & AI Search Visibility)

SEO & AI Search Visibility (SEO + AEO)

Every IDX website and agent landing page is built to be found on Google and cited by AI answer engines (ChatGPT, Perplexity, Google AI Overviews) with no setup, and every tenant's sites are crawled and audited automatically.

> We guarantee every page passes 100% of our technical SEO and AEO checks. Rankings also depend on content, links and competition, so no platform can guarantee them.

Feature	Brokerage can	Agent can
Technical SEO by default	Get server-rendered pages, clean URLs (e.g. /homes/jackson-ms/123-main-st), canonical tags, mobile-first layouts, passing Core Web Vitals, HTTPS, image alt text	Get the same on every landing page automatically
Titles and descriptions	Set site-wide title and description patterns; override any page	Edit title, description and share image per page

Feature	Brokerage can	Agent can
Structured data (schema.org)	Get Organization, LocalBusiness, RealEstateAgent, RealEstateListing, Offer, Place, BreadcrumbList, FAQPage and Article markup generated automatically	Get RealEstateAgent and listing markup on their profile and pages
AEO (answer engine optimisation)	Use answer-ready blocks (FAQs, neighbourhood Q&A, dated market stats); publish an llms.txt per site; keep name, address and phone consistent; choose which AI crawlers may access the site	Accept AI-suggested FAQs for their farm areas; publish area guides that answer common buyer questions
Sitemaps and indexing	Get XML sitemaps per domain (listings, communities, agents, blog) updated as listings change; robots.txt per domain; IndexNow pings on every change; Google Search Console connection with automatic sitemap submission	Have their pages included in the brokerage sitemap, or their own sitemap on their own domain
Auto crawl and site audit	Have every site crawled on a schedule and after each publish: broken links, missing titles, duplicate content, slow pages, schema errors; SEO/AEO score per page with a fix list	See the score for each of their pages with fix-it tips
Local SEO content	Auto-generate community and city pages with unique MLS-based stats; link the Google Business Profile	Create area pages for their farm areas
Duplicate listing control	Rely on canonical rules so the same MLS listing on brokerage and agent pages does not compete with itself	—
MLS-compliant indexing	Rely on per-MLS rules for what may be indexed (e.g. sold or off-market data)	—
Search and AI traffic reports	See Search Console impressions, clicks and top queries per site, plus visits referred by AI assistants	See the same for their own pages

Listing Marketing Centre

Feature	Brokerage can	Agent can
Automatic listing kit	Set brand templates once	On every new listing, get a single-property website, flyers, social posts and an email blast in the brokerage brand, each checked by AI compliance
Video and 3D tours	Choose brand intro, music and caption styles	Turn listing photos into an AI video tour for reels and the listing page; add Matterport or other 3D tour links; build a clickable 360° walk-through from 360° camera photos
Open house kit	See open-house activity across the brokerage	Use QR or tablet sign-in; visitors go into the CRM and get an automatic follow-up
Seller reporting	—	Share a report with the seller: views, saves, enquiries and showings per listing
AI listing descriptions	Set tone and phrases to avoid	Generate MLS-ready descriptions from listing details and photos, checked for fair housing language before use

Feature	Brokerage can	Agent can
Floor plans	Choose the floor-plan style shown on listing pages	Scan a home with their phone through a floor-plan partner service and get a measured floor plan added to the listing page and flyers
Sign riders and QR codes	—	Put a text code or QR code on yard signs; buyers get listing details instantly and become leads in their CRM

Home Valuation & CMA

Feature	Brokerage can	Agent can
Seller lead pages	Publish 'What's my home worth' pages on the brokerage site	Use their own valuation landing page and referral link
Instant estimate	Choose the valuation data provider	Have homeowners get an instant value range and arrive in the CRM as seller leads
CMA builder	Brand the CMA and listing presentation templates	Build a comparative market analysis from MLS data and send a branded report or presentation
Home value updates	—	Send owners automatic monthly value updates to stay top of mind
Net sheets and cost estimates	Brand seller net sheet and buyer cost templates with local fees	Create a seller net sheet or buyer cost estimate in a minute and send it as a branded PDF

Showings & Client Portal

Feature	Brokerage can	Agent can
Showing requests	Set showing rules per office (notice time, auto-confirm, access notes)	Let buyers request showings from the IDX site; confirm, reschedule or decline from their phone, synced to their calendar
Listing showings	See showing activity on brokerage listings	Manage showing requests on their listings with seller approval and automatic feedback requests
Tour planner	—	Plan a multi-home tour with route and times and send the itinerary to clients
Client portal	Brand the portal	Give buyers and sellers one place to see saved homes, showings, documents to sign, deal milestones and key dates
Showing services	Connect ShowingTime where the local MLS relies on it	—

Agent Referral Network

Feature	Brokerage can	Agent can
Referral directory	Opt the brokerage in and choose which agents appear	Find agents in other RightAlly brokerages by area, language and specialty
Send and receive referrals	Approve outgoing and incoming referrals	Send a client to another agent with a broker-to-broker referral agreement e-signed by both sides
Referral fees	Track expected and received referral fees, flowing into Transactions and Finance	See referral status, expected fee and payment
Partner ratings	See response times of partner agents	Rate partners after each referral
Referral Trust Score	See each partner's score card before approving a referral	See each partner's activity status, acceptance rate, speed of contacting referred clients, referred clients closed, recent MLS production, ratings, active licence, specialties and areas
Warnings	—	See clear warnings such as "Last active 9 days ago, may not respond" or "Slow to contact referred clients"
Safer sending	Set the referral time limit for partner contact	Send to the top three matches, first to accept wins; the referral returns if the partner does not contact the client in time

Recruiting Suite

Feature	Brokerage can	Agent can
Recruit pipeline	Track prospects from first contact to signed	Refer agents and track their referrals
Revenue share calculator	Publish a calculator showing what a recruit could earn	Share the calculator with prospects
Hand-off	Send a signed-up prospect straight into onboarding	—
Recruiting intelligence	See top-producing agents in the market from MLS sales data, with growth trends (subject to each MLS's data licence)	—
Agent database	Search every agent in the market by volume, units, average price, current brokerage and history from MLS production data (where the MLS licence allows)	—
Recruiting alerts	Get alerts when an agent's production jumps, they change brokerages or reach a licence anniversary	—
Recruiting campaigns	Run automated recruiting email and text sequences with consent rules	Run their own recruiting campaigns if allowed
Earnings comparison	Show recruits what they would earn at the brokerage versus their current one	Share the comparison with prospects

Feature	Brokerage can	Agent can
Career site and events	Publish a career site, career-night registrations and interview booking	Invite prospects to events
Recruiter attribution	Track who recruited whom, with sponsor and revenue-share incentives	See their recruits in a personal pipeline and on leaderboards
Recruiting ROI	See cost and source per recruit and the production each recruit brings after joining	—
Likely-to-move score	See which agents in the market are most likely to move, from time at current brokerage, production trend, recent changes and licence anniversary	—
AI outreach	Send AI-personalised messages written from each agent's own production, followed up automatically over months	Use AI outreach for their own recruits if allowed
Recruiting funnels	Launch recruiting ad funnels with career pages, culture videos and "what would I earn?" calculators; employment-ad rules applied	Share recruiting pages through their referral link
Social proof and income illustration	Collect and publish agent testimonials automatically; show recruits how revenue share and caps would work under the brokerage's real plans	Record a testimonial and appear on recruiting leaderboards

Run suite (back office)

Run is how the brokerage operates: agents join, sign, close deals and get paid, with every dollar recorded in a ledger. This suite replaces today's RightAlly platform plus separate forms and transaction tools.

Agent Onboarding & Workflows

Feature	Brokerage can	Agent can
Onboarding flow	Use the standard flow (register, documents and addendum, agreement e-sign, payment, approval, welcome) or edit its steps	Join from an invite, website or agent page; finish later where they left off
Agreements	Upload and version agreements and addenda; see who signed which version	Read and e-sign online; download signed copies
Payment at signup	Set onboarding and monthly fees per plan, coupons	Pay by card at signup
Licence and tax info	Require licence number, an electronic W-9 with tax ID check and other documents	Upload documents from phone or computer
Approvals	Approve or reject with comments; track MLS and board onboarding	See status and what is still missing
Other workflows	Build workflows for offboarding, transfers, policy acknowledgement	Complete assigned steps

Forms & e-Sign (dotloop-class)

Feature	Brokerage can	Agent can
Buyer agreement	Set the brokerage's buyer agreement template and required compensation fields	Send a buyer agreement for e-sign from the CRM contact in minutes, before touring
Transaction rooms	Require a room per deal; see all rooms	Create a room per deal; invite clients, co-agents, lenders, title
Form library	Publish state and brokerage forms and clause library (state forms subject to licence)	Fill forms auto-populated from the deal and MLS data
e-Signature	Set required signers and signing order rules	Send for signature, sign in person or remotely, on phone; legally valid audit certificate
Templates	Share room templates per deal type	Save personal templates and task lists
Review	Review documents before sending	See review comments and fix them
Smart extraction	—	Have key dates and prices pulled from signed documents into the transaction
AI form builder	Upload any PDF and have AI turn it into a smart form mapped to deal, contact and MLS data; add conditional fields, calculations, signature blocks, version control and templates by deal type and state	Use the brokerage's smart forms, addenda and disclosures, filled automatically
e-Sign extras	Require identity verification for high-value documents	Bulk send, automatic reminders, in-person and remote signing on mobile

Feature	Brokerage can	Agent can
Works with dotloop, SkySlope, Lone Wolf and DocuSign	Adopt RightAlly without forcing agents to switch forms tools; signed documents, status and dates still flow into transactions, compliance and commissions	Link their account once; deal data pre-fills their forms and signed documents come back to RightAlly

Transactions (Brokermint-class)

Feature	Brokerage can	Agent can
Deal pipeline	See every listing, buyer, dual, lease and referral deal from pre-contract to closed	Create deals or convert a CRM contact to a deal
Checklists	Define required documents by deal type and state	Upload documents against the checklist
Compliance review	Work a review queue: approve, reject, comment	Get notified and fix rejected items
Key dates	See upcoming closings and deadlines across the office	Get reminders for inspection, appraisal, financing and closing dates
Earnest money	Track deposits and escrow	Record deposits received
Commission paperwork	Generate commission disbursement authorizations (CDAs)	See the expected commission before closing
Imports	Import past deals from other systems	—
AI document review	Have every uploaded document checked for missing signatures, initials and dates before staff review	See issues flagged instantly and fix them before submitting

Deal-IQ (AI transaction coordinator)

Feature	Brokerage can	Agent can
Talk or type to it	Decide which Deal-IQ actions need broker approval	Type in the chat on any deal, or tap the mic and speak on any device, from a phone to the laptop or desktop dashboard on the website (speech becomes text they can check before Deal-IQ acts); or text, send a voice note to, or email their personal Deal-IQ number and address; turn on read-aloud answers for hands-free use: ask "What's left on 14 Oak Street?" or say "Move the inspection to Friday and tell the lender"; Deal-IQ previews the action and waits for confirmation
Start a deal any way	See every new deal in the transaction pipeline	Upload, forward the contract email, text a photo or say "new deal"; the deal, parties, timeline and checklist are created and uncertain fields flagged
Contract and addendum drafting	Choose which licensed state forms are available	Have offers, counters, extensions, amendments and termination notices filled on the correct state form from CRM and MLS data, then sent for e-signature after approval

Feature	Brokerage can	Agent can
Client concierge (24/7)	Set what the concierge may discuss	Give clients a branded assistant in the client portal that answers only from their own deal, never gives legal, tax or financial advice, hands those questions to the agent and shows the agent every conversation
All-party portal	See portal activity in the audit log	Give title, lender, the cooperating agent and attorneys a secure link to their milestones and document requests, with direct uploads
Deal health	See at-risk deals across the brokerage	See at-risk deadlines, missing signatures and overdue documents in the daily game plan
Solo agents	—	Use the personal side (contract reading, timeline, reminders, voice and text, concierge, DocIQ, drafting on forms they are licensed to use) and send a one-click broker packet to their broker; full broker-file submission unlocks through Ask my broker
Feature	Brokerage can	Agent can
Contract to timeline	Set standard timelines by deal type and state	Upload the signed contract; the AI reads it and builds the deal timeline with every key date
Automatic reminders	Set which parties are contacted and how	Have reminders sent to buyers, sellers, lenders, title and inspectors on schedule, in the agent's name
Missing items	See deals at risk across the office	Have missing documents chased automatically until the checklist is complete
Closing countdown	—	See one closing countdown showing what is done and what is next
Human control	Require approval of the AI's messages before sending, or let it send automatically	Edit or pause any message
More in Deal-IQ	Brokerage can	Agent can
Inbox intelligence	See every deal email filed to the right deal across the brokerage	Connect Gmail or Outlook; deal emails are filed to the right deal even without the address in the subject, summarised and turned into tasks; replies go from their own address after approval, with no AI branding
Smart timeline engine	Rely on state rule packs kept by RightAlly HQ; write the office checklist once in plain English and have it applied to every file	Get timelines that count business days and state holidays, resolve counteroffer chains, recalculate every dependent deadline when an amendment changes a date, and adapt to property type and financing
Continuous compliance scan	See a broker-ready score on every file; accept one-click submissions only when no blockers remain	See findings graded blocker, warning or info (missing signatures, blank fields, mismatches across documents, missing referenced documents, required disclosures, buyer agreement before touring) with the fix for each

Feature	Brokerage can	Agent can
Deadlines that cannot be missed	Receive escalations for blockers within 48 hours of a deadline	Get reminders that escalate from in-app to email, text and automated voice call, calendar invites for every party, and at-risk warnings such as "lender silent for 5 days"
Money milestones and wire-fraud protection	Track earnest money to receipt and generate the commission disbursement authorisation from the compensation engine	Follow closing-disclosure timing; use verified wiring instructions and call-back reminders; wire details are never sent by email
Daily brief and ask-across-deals	Ask questions across every deal in their scope	Get a morning brief of due, overdue and upcoming items; ask "Which deals close this week?"; send automatic weekly client updates
TC team mode	Assign deals to human coordinators, see workloads and nudge in one click; sell TC service to agents for a per-file fee through the compensation engine	Hand a deal to a TC with full context
After closing and results	Keep a compliance archive for each state's retention period; see days to close, deadline-miss rate and broker-ready rate	Send review requests and keep past clients in the CRM; see their own results and hours saved

Compensation & Revenue Share

Feature	Brokerage can	Agent can
Plan builder	Create plans: registration fee, monthly and per-agent fees, percentage split, flat fee per deal, caps with reset dates, post-cap fees, team splits, lead-source-based splits	See their plan and what it means in plain language
Ranks and targets	Set rank levels and production targets that change splits	See progress to the next rank or target
Revenue share	Configure multi-level revenue share (Net Profit or GCI basis), eligibility rules, root fallback, sponsor and co-sponsor shares	See revenue share earned by level
Genealogy and downline	See the full organisation tree; search any agent	See their downline in several views: graphical genealogy tree (expand, collapse, search, member card), level-wise list, team summary by level, new joins, active and inactive status
Sponsor changes	Reassign a sponsor or co-sponsor with a reason and audit trail	See their sponsor and co-sponsor
Agent exits	Set what happens to a leaving agent's downline (e.g. it moves up to the next eligible upline)	—
Revenue share statement	See revenue share paid by source deal	See which downline deal produced each revenue share payment
Deductions	Maintain a deductions and fees catalogue, versioned with effective dates	See every deduction on each deal
Versions	Change plans with an effective date; history kept	—
Simulator	Model plan changes before applying them	Run 'what if' on a deal; recruits can compare plans
Cap status	See cap status for all agents	See cap progress and remaining amount

Finance, Payouts & Billing

Feature	Brokerage can	Agent can
Ledger	See every commission, fee and payout as a ledger entry; corrections by reversal	See their full earnings statement
Agent billing	Invoice fees, auto-charge cards, retry failed payments, suspend for non-payment	Save cards, pay invoices, see billing history
Payouts	Run payouts by ACH or bank file; approve in batches	See paid and pending amounts and payout dates
Payout settings and withdrawals	Allow withdrawal requests and approve them; set minimums and schedules	Connect a bank account (Stripe Connect), submit a W-9, and request a withdrawal from their available balance if enabled
Tax	Generate 1099-NEC forms	Download 1099s and W-9
Accounting	Sync to QuickBooks Online or Xero	—
Reports	GCI, company dollar, cap status, trust and escrow, profit and loss	Personal income and production reports
Same-day payouts	Offer same-day payouts after broker approval, with an optional fee	Get paid the same day once the broker approves
Revenue forecast	See projected brokerage income from deals in the pipeline next to the live P&L	See projected personal income from pending deals
Electronic W-9	Collect W-9s online with tax ID checks so 1099s file correctly	Complete their W-9 online
Automatic payouts on closing	Set payout rules (deal closed, compliance approved, funds received) with automatic holds for missing documents or unpaid fees	Get paid automatically when a deal closes and funds arrive
Money-in tracking	Record commission cheques and wires from title companies and match them to deals	See when funds for their deal are received
Offsets and payables	Deduct unpaid fees, E&O premiums or referral fees at payout; pay referral fees, co-op splits and vendors from the ledger	See each deduction on their statement
Bank reconciliation	Connect operating and trust bank accounts and match transactions to ledger entries	—
1099 e-file	File 1099-NECs with the IRS and deliver them electronically	Receive 1099s electronically
Finance reports	See P&L by office and team, agent profitability, cap and fee projections and trust account reports by state; email monthly agent statements automatically	Receive a monthly statement

Protect suite (compliance)

Protect keeps the brokerage out of trouble: AI checks marketing before it goes out, agents get sourced answers on rules, and the broker has one review queue with a full audit trail.

> AI findings flag issues and cite the rule; the broker always makes the final decision.

AI Ad & Flyer Compliance

Feature	Brokerage can	Agent can
Check before publishing	Require a check for flyers, ads, social posts, emails and landing pages	Upload a flyer or post and get results in seconds
What it checks	Add brokerage-specific rules to the standard state and MLS rules	See issues: missing brokerage name or licence, Equal Housing logo, fair housing wording, coming-soon and pocket-listing rules
Explanations and fixes	—	See the rule cited for each issue and a suggested fix; re-check after editing
Approval	Approve or reject in the review queue	Get approval notifications
History	Keep every check on record per agent	See their check history
Visual markup and one-click fixes	—	See boxes drawn on the image at each problem; insert brokerage logo and licence number, add the Equal Housing logo or rewrite wording in one click, then re-check
Data checks	Rely on checks a general AI cannot do: price, beds, baths and status against the live MLS listing, active licence, and other brokerages' watermarks	Check from the tracker, the AI chat or a phone photo

Compliance Knowledge

Feature	Brokerage can	Agent can
Ask questions	—	Ask about state law, licence rules, MLS rules or brokerage policy in plain English
Sourced answers	—	Get answers that cite the exact source, or 'not found' instead of guesses
Brokerage library	Add the policy manual and other documents to the library	Search the brokerage's own documents
Updates	Get alerts when a rule in the library changes	Get relevant change summaries
Answers where you work	See every question and answer logged; receive one-click escalations; no need to build or maintain a shared notebook such as NotebookLM	Get sourced answers inside the flyer check, listing description, transaction, AI chat and email, with no copying and pasting

Broker Review & Audit

Feature	Brokerage can	Agent can
One review queue	Review documents, ads and transactions in one place, by office	See items waiting on them
Audit packs	Export evidence for a state audit or complaint	—

MLS Display Rules (automatic)

Feature	Brokerage can	Agent can
Rule enforcement	Rely on per-MLS attribution, disclaimers, logos, sold-data and refresh rules applied to every page	Share listings knowing the pages are compliant

Fair Housing Guardrails (automatic)

Feature	Brokerage can	Agent can
Language checks	See flagged items across the brokerage	Get warnings on risky wording in listing descriptions, ads and messages, with alternatives

Licence & Compliance Tracking

Feature	Brokerage can	Agent can
Licence records	Keep every agent's licence number, state and expiry date, verified at onboarding	Upload and update their licence details
Continuing education	Track continuing education hours due per state and renewal cycle	See hours completed and still due
Insurance and dues	Track E&O insurance, board and MLS dues and their expiry dates	Upload renewals
Reminders and holds	Send automatic reminders before expiry; optionally pause listings or deal submission when a licence lapses	Get reminders 90, 60 and 30 days before expiry

Know suite (intelligence and engagement)

Know keeps everyone informed and productive: an AI assistant that only sees the brokerage's own data, live dashboards, training, team communication, support and mobile apps.

DocIQ

Feature	Brokerage can	Agent can
Ask and compare	Use DocIQ on any document they can access	Upload or pick a document and ask in plain English, with answers citing page and section or "not found in this document"; compare versions
Warnings and corrections	Set rules for what is flagged	See warnings (missing signatures or initials, conflicting dates, terms that differ from the contract or MLS, calculation errors, missing addenda) with the suggested correct value and its source; one-click fix on smart forms or a draft correction addendum for outside documents
Document-driven automation	Choose which automations run automatically and which need approval	Have key dates become reminders, parties identified, documents sent for e-signature and every party reminded by email until done
Ask my broker	Receive the document, question and AI answer together	Escalate in one click
Guardrails	See every question, warning and correction logged	Answers only from the documents provided; signed documents never edited, corrections via a new version or addendum; information, not legal advice; documents private, encrypted and never used to train AI

Daily Game Plan & AI Coach

Feature	Brokerage can	Agent can
Daily game plan	Choose defaults for what the plan includes	Get the top 5 actions each morning by email, push or text, ranked by likely payoff, each with the reason and talking points
One-click actions	—	Tap to call or send a pre-drafted text or email they can edit, straight from the email or phone
Deadlines and risks	—	See contract dates, documents to sign, deals at risk and leads about to be re-routed
Goal pace	Set team goals	See whether they are on pace for their income goal this week
Evening wrap-up and weekly coaching	—	Get an evening wrap-up and a weekly coaching note on response time, contact rate and conversion, with one specific tip
Leader view	Team leads and brokers see which agents have untouched hot leads	—

Feature	Brokerage can	Agent can
Learning and respect	Set quiet hours and channels	Rankings improve as the AI learns, from anonymised patterns only, which actions lead to appointments; one plan a day, never noise

RightAlly Assistant (AI)

Feature	Brokerage can	Agent can
Ask anything	Turn it on per role; add brokerage FAQs	Ask 'how do I…', 'what is my cap status', 'which deals close this week'
Draft and act	Set which actions it may take	Draft follow-up emails and texts, create tasks; every action needs confirmation
Guardrails	Know it answers only from the brokerage's data and the user's permissions	Get answers only from what they are allowed to see

Reports & KPIs

Feature	Brokerage can	Agent can
Dashboards	Choose KPIs for the admin dashboard (today's 40 KPI definitions carried over)	See personal dashboard: GCI, deals, cap, leads, revenue share
Leaderboards and goals	Set company goals and leaderboards by office or team	Set personal goals and track progress
Report builder	Build, save and schedule custom reports; export to Excel or PDF	Run personal reports
Business planner	See team plans and progress	Turn an income goal into the deals, appointments and calls needed each week, tracked automatically
Agent Success dashboard	Track speed to lead, contact rate, appointments per week, conversion at each stage and database touches by agent and team	See their own success numbers and how they improve over time
Monthly ROI report	Receive an automatic monthly report on software savings, agent results and adoption	—
Retention alerts	Get AI alerts when an agent's activity drops or they look likely to leave, with suggested actions	—

Agent Activity & Engagement

Feature	Brokerage can	Agent can
Agent status	See each agent as Active, Idle, or Away / out of station after a set number of days without logging in (4 by default, adjustable)	See their own status
Last login and activity	See last login and last activity by type: calls, texts, emails, showings, leads accepted, deals created	See their own activity history

Feature	Brokerage can	Agent can
Engagement score and feed	See an activity feed and engagement score per agent and team; run activity leaderboards	See their score and leaderboard position
Alerts and digest	Get inactivity alerts and a weekly digest; activity feeds the AI retention alerts	—
Transparency	Set out what is tracked (work activity only) in the policy manual	Read what is tracked

Training & Knowledge Base

Feature	Brokerage can	Agent can
Courses	Create courses with videos, documents and quizzes; assign by role or as onboarding tracks	Take courses on web or phone
Tracking	See completion by agent	See progress and certificates
Policy manual	Publish and version the policy manual with acknowledgement	Read and acknowledge policies

Communication & Chat

Feature	Brokerage can	Agent can
Announcements	Post brokerage, office or team announcements	Read and react
Chat	Create channels by office or team	Chat one-to-one or in groups, share files
Events and meetings	Schedule events, trainings and meetings with Zoom or Google Meet links	RSVP and add to calendar

Support & Help Centre

Feature	Brokerage can	Agent can
Help centre	Publish brokerage-specific help articles alongside RightAlly's	Search help articles and video guides from any screen
Tickets	Raise tickets to RightAlly support; handle agent tickets internally with categories and response targets	Raise tickets to brokerage staff and track replies
Guided tours	Turn on guided tours for new features	Follow in-app tours and what's-new notes
Status	See the RightAlly platform status page	—

Mobile (Flutter apps)

Feature	Brokerage can	Agent can
Mobile web app (launch)	Offer an installable mobile version of the portal from day one, with push notifications	Work leads, inbox, deals and earnings on their phone from the home screen
Native apps (Flutter)	Approve deals, review documents, see dashboards	Work leads, sign documents, manage deals, see earnings, get push alerts
Timing	Native apps built after the web platform, on the same APIs	—

RightAlly website & brokerage signup

The public RightAlly website (rightally.io) runs on a full CMS, is SEO and AEO optimised, and is where brokerages discover, compare and buy RightAlly, and signing up launches their platform automatically. It absorbs today's rightally-onboard flow.

Feature	Prospective brokerage can	RightAlly (super admin) can
Packages and pricing	Compare packages and add-ons side by side: setup fee, monthly platform fee and per-agent pricing	Publish packages, prices and promotions from the package catalogue
Book a demo	Book a discovery call in the RightAlly calendar (GoHighLevel)	See booked calls and coupon codes in the admin
Self-service purchase	Enter brokerage details, apply a coupon, e-sign the RightAlly agreement and pay by card (deposit at signing, balance at go-live, then monthly fees)	Adjust go-live dates and billing schedules; see signed contracts
Legal acceptance	Accept terms, privacy policy and data processing agreement, recorded with a timestamp	Version the legal documents
Automatic launch	Get their platform created instantly: default IDX site on brokerage.rightally.app, admin login and setup wizard	Monitor new launches and setup progress
CMS pages and blog	Read product pages, guides, case studies and comparisons	Let content staff create pages, blog posts, case studies and campaign landing pages with the premium block builder; drafts, scheduling, versions and approval before publishing
Media, navigation and redirects	—	Manage the media library, menus, URL redirects and multiple authors
SEO and AEO	Find RightAlly through Google and AI assistants	Use the same SEO & AI Search Visibility engine as tenant sites: schema, sitemaps, llms.txt, automatic crawl and audit, Search Console reports
Savings calculator	Enter what they pay today for their current tools and see what they would save	Maintain the competitor price list behind the calculator
Brokerage Health Check	Get a free report: software spend and savings, agent production against the market, recruiting opportunities, and a scan of their current website for SEO, AEO, speed, accessibility and fair housing issues	Turn every health check into a qualified sales lead
Instant branded preview	Enter their domain and MLS and see their own brokerage in RightAlly within minutes: premium template with their logo, colours, listings and agent roster	Use previews in demos and follow-up
Switching without risk	Get white-glove migration, a parallel commission run, the data-export guarantee and a satisfaction promise	Set the satisfaction promise terms
Lead capture	Request a demo or download a guide	Send every form submission into RightAlly's own CRM for the sales team

RightAlly for Agents (solo plan)

Feature	Brokerage can	Agent can
Solo packages	—	Choose a package created by RightAlly HQ (e.g. Solo Free with limits, Solo Pro, Solo Pro with assistants) and add-ons such as assistant seats, enrichment credits and the dialer
Own workspace	—	Log in through the RightAlly website to a private workspace; no staff, team, genealogy or view of other agents, apart from opted-in agents in the referral network directory
Tools	—	Use the personal CRM with instant AI lead response and unified inbox, lead enrichment and scoring, the daily game plan, marketing automation, CMA, net sheets, buyer cost estimates and the referral network
Website and landing pages	—	Build a personal website (home, about, testimonials, blog, guides, valuation, contact) from dedicated solo templates plus landing pages, on a RightAlly sub-domain or their own domain by CNAME with automatic SSL; showcase their own listings entered manually; brokerage name and licence shown automatically and AI compliance checks applied
Assistant seats	—	Add assistants with role presets (Full, Lead / ISA, Marketing, Admin) who follow up leads, answer the inbox, book appointments, take assigned game-plan actions, run campaigns and prepare CMAs; they cannot change billing, export data, see earnings or delete in bulk by default; every action logged
Ask my broker	Receive a personalised request with the agent's results, likely savings and a one-click demo or trial	Request features that need the brokerage (IDX website and MLS search, transactions, forms and e-sign, commissions, revenue share, payouts, compliance review, recruiting) with one click
Data portability	Set clear rules: agents' own contacts are portable, brokerage-provided leads stay with the brokerage	Keep their own contacts if they move; fold into the brokerage with workspace, contacts and assistants intact when it joins (assistants become staff scoped to that agent)
Win cards	—	Share "my numbers since RightAlly" cards inside the brokerage and on social media

Referral & Affiliate Programme

Feature	Brokerage can	Agent can
Brokerage referrals	Earn rewards for referring other brokerages	Earn credits or a share of the subscription when a brokerage they introduce joins
Network invitations	—	Invite outside agents to receive referrals, which requires joining RightAlly

Feature	Brokerage can	Agent can
Recruiting badge	Promote "we give every agent RightAlly" with a ready-made toolkit (badge, career-page section, social posts, comparison sheet)	—
Rewards and tracking	See rewards earned	See rewards earned and paid

Super admin (RightAlly HQ)

The super admin and HQ staff run the SaaS: what is sold, to whom, and how releases reach brokerages.

Feature	Super admin can
HQ staff and roles	Create staff accounts and roles to run RightAlly (e.g. Package manager, Sales, Billing, Onboarding specialist, Support, Content editor, Release manager) using the same permission matrix, approval limits and audit log as brokerages
Packages	Let staff with package rights create, edit, version and retire packages for brokerages and solo agents (e.g. Starter, Growth, Enterprise; Solo Free, Solo Pro) with included modules, seat limits and prices; changes can require approval before going live
Add-ons	Sell any module as an add-on, per brokerage or per agent seat; trials and coupons
Brokerage management	See all brokerages, their package, usage, health and billing; suspend or reactivate
Support access	Log in to a brokerage to help, with consent and full audit
Libraries	Maintain the IDX templates, state form library, compliance rules library and workflow templates shared with all brokerages
MLS connections	Manage MLS feeds and brokerage authorisations
Releases	Turn new features on for pilot brokerages first, then for all; publish release notes
Platform reports	MRR, churn, active agents, module adoption, system health
Legacy RightAlly migration	Move existing RightAlly brokerages with plans, agents, sponsor trees, agreements, deals, earnings and ledger balances, running old and new commissions in parallel until they match to the cent
White-glove migration	Run a migration service that moves each new brokerage's agents, contacts, deals and documents from their old tools for them
Credit rate card and margins	Set credits per action; when building a package see included credits, their real provider cost and the margin, with a warning below a threshold; compare provider spend with credits used per brokerage and feature
AI model registry	Add AI providers and models (Claude primary; OpenAI, Google Gemini and open-source alternatives) with real costs; choose the model and fallback chain per feature; test models against quality checks before switching; see cost and quality per model; only no-training, zero-data-retention providers
SEO and AEO standards	Maintain the platform-wide SEO/AEO checklist, schema templates and crawl schedule; monitor audit scores across all tenant sites

Brokerages manage everything inside their own account themselves; the super admin is not needed for day-to-day changes.

How RightAlly beats the market leaders

Leaders are strong in one or two areas; brokerages still stitch together several of them. RightAlly adopts the best of each and wins on what none of them offer: one platform from lead to payout to revenue share, live the same day.

Area	Leaders today	What they do well	How RightAlly does it better
CRM and lead follow-up	BoldTrail (kvCORE), Lofty, Follow Up Boss	Behavioural nurture, AI lead scoring, AI assistants that reply and qualify, clean agent experience	Instant AI response plus unified inbox from launch; a simpler interface than feature-heavy suites; the only CRM tied directly to deals, commissions and revenue share
IDX websites	Luxury Presence, BoldTrail, Lofty, Real Geeks	Luxury design, AI home search, lead capture	15 premium templates, plain-English AI search, automatic SEO/AEO audit per site, sub-100 ms pages, MLS compliance built in
Agent pages and listing marketing	Lofty, Luxury Presence, design tools such as Canva	Personal-brand sites, design templates	Listing kit generated automatically from MLS data, AI-compliance checked, with AI video tours and referral links that assign sponsors
Seller leads and CMA	Cloud CMA, RPR	Valuation pages, CMA reports	Valuation, CMA and seller follow-up connected to the CRM and IDX site
Forms and e-sign	dotloop, Lone Wolf Transact, DocuSign	Deal rooms, state forms, e-sign	Forms auto-filled from CRM and MLS, AI date extraction, built-in buyer agreement flow, flowing straight into transactions and commissions
Transactions and back office	BoldTrail BackOffice (formerly Brokermint), SkySlope, Lone Wolf	Checklists, compliance review, commission tracking, agent billing	Native revenue-share and cap engine, double-entry ledger, AI document review, one review queue for deals and ads
Compensation and revenue share	Mostly custom systems at eXp- or Real-style brokerages	Revenue share at scale	A plan builder any brokerage can configure, with a simulator, genealogy views and transparent statements
Compliance	Few dedicated tools	—	AI flyer checks and a sourced compliance assistant, a new category
Prioritisation and closing more	BoldTrail, Lofty	Smart lists, AI lead scoring	A daily game plan with ranked one-click actions, enrichment-based scoring that shows its reasons, database reactivation, and an outcome dashboard that proves results
Lead distribution and referrals	Realtor.com-style performance programmes; CRM routing rules	Reward agents who respond and close	Portal-style performance distribution inside every brokerage, with scores, tiers, offer windows and automatic reclaim, plus a trust score on every referral partner
Lead generation	BoldTrail, Lofty, lead-gen agencies	Managed ad programmes	Ready buyer and recruiting funnels from the brokerage's own ad accounts, AI-built ads optimised on real closings, quality filters, content and social autopilot, and cost per closing by source
Adoption and switching	Sales-led suites	Enterprise sales teams and demos	Agents start on a solo plan and pull their broker in; free health check and branded preview; risk-free switching; referral rewards and a recruiting badge that make RightAlly a reason to join a brokerage
Setup and switching	Common complaint: long setup and steep learning curves	—	Live the same day, guided setup, one-click migration from the major platforms

How the modules work together

One deal touches ten modules without anyone re-typing data; this is the main reason a brokerage would replace its separate tools with RightAlly.

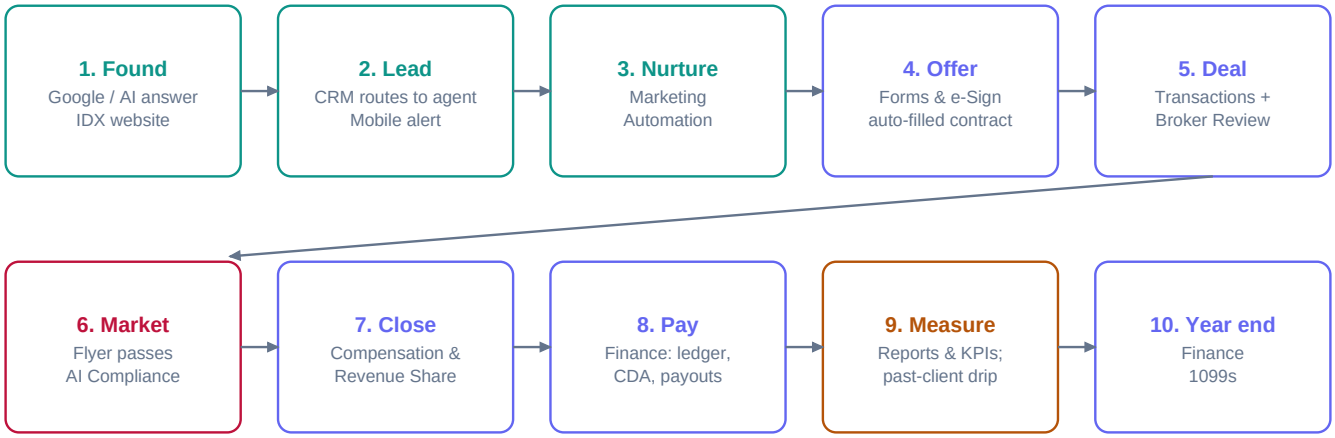

Figure 2 - One deal from first search to year-end 1099, across ten modules

1. A buyer finds the brokerage through a Google search or an AI assistant's answer, searches homes on its **IDX website** and registers after viewing three listings.
2. **CRM & Lead Routing** creates the lead and routes it to the right agent by area; the agent gets a push alert on **Mobile**.
3. **Marketing Automation** starts a buyer drip and listing alerts while the agent follows up.
4. The buyer makes an offer: the agent opens a room in **Forms & e-Sign**, the purchase contract fills itself from CRM and MLS data, and everyone signs online.
5. **Transactions** creates the deal with its checklist and key dates; the broker reviews documents in **Broker Review**.
6. The agent's open-house flyer passes the **AI Ad & Flyer Compliance** check before it is posted.
7. At closing, **Compensation & Revenue Share** calculates the agent split, cap progress, deductions and upline revenue share.
8. **Finance & Payouts** records it in the ledger, generates the CDA, pays the agent and posts revenue share to the upline.
9. **Reports & KPIs** update dashboards and leaderboards; **Marketing Automation** moves the client to a past-client nurture campaign.
10. Year end: **Finance** produces the agent's 1099.

Next step: Phase 1 turns each module above into a detailed specification (screens, rules, data, acceptance criteria), starting with Platform Core and Compensation & Finance.
